- Languages: Java, TypeScript, HTML, CSS, JavaScript, SQL, C
 - Frameworks & Libraries: Spring Boot, J2EE, Hibernate, React.js
 - Databases: SQL, PostgreSQL
 - Tools & Platforms: Git, Jenkins, Docker, AWS, Google Cloud Platform
 - Concepts: SDLC, DSA, Agile, RESTful APIs, Selenium, Manual Testing
-

Work Experience

Software Engineer | Cades Studec Technologies India Private Limited

May 2025 – Current

- Currently undergoing functional and technical training as part of the WebXML Viewer project.
 - Worked with both Viewer and Builder applications used for viewing and managing structured publications.
 - Gained hands-on experience with frontend development using React and TypeScript, and backend development using Spring Boot for building robust web applications.
 - Worked on database management with PostgreSQL.
 - Developed an understanding of the ticketing process, including how customer issues are received, requirements gathered and analyzed, and solutions delivered by the team.
 - Continuing to build technical skills and project understanding as part of a collaborative, production-focused development team.
-

Academic Projects

1. Spring Security Role-Based Authentication and Authorization

- Developed a robust role-based authentication and authorization system using Spring Security.
- Built secure and scalable REST APIs to manage user roles and permissions.

- GitHub: [Spring Security Project](#)

2. Skill Development Management System

- Created a web platform to support professional skill development and training.
 - Implemented both front-end and back-end functionalities with efficient data handling.
 - GitHub: [SVU Skill Development Project](#)
-
